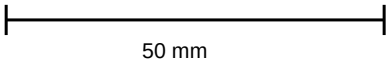
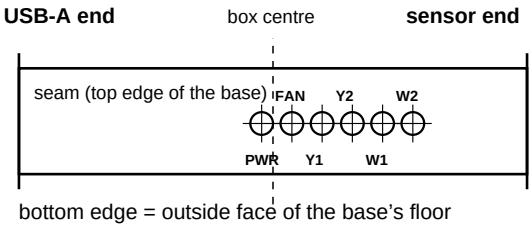
AirMaster Rev B: LED drill template, 1593K base, left wall

Print at 100 % / Actual size. The bar below must measure 50 mm; if not, do not use the print.





1. Cut along the strip's outline. The two end lines are the box's outer ends, 67.22 mm apart.
2. Tape the strip to the left wall of the BASE (the half with the floor and the posts), outside, bottom edge on the floor's outside edge, the USB-A end toward the panel notched for J4 and micro-USB. Centre the box-centre line on the wall; the end lines then fall on the rounded corners.
3. Centre-punch each cross, drill 1.5 mm, then 3 mm. Plastic: low speed, light pressure.
4. Holes are 4 mm apart, 6.7 mm above the outside bottom face. From the USB-A end: PWR green, FAN yellow, Y1 blue, Y2 blue, W1 red, W2 red.
